## Adobe PageMaker 6 and 7 Export Settings for PC

### Note:

- Adobe Acrobat software must be installed on your computer in order to create a PDF file.
- Before executing this procedure. The Versa Press setting preference for Acrobat Distiller needs to be created. If you have not yet created this setting preference, please execute the Windows Acrobat Distiller procedure first and then return.

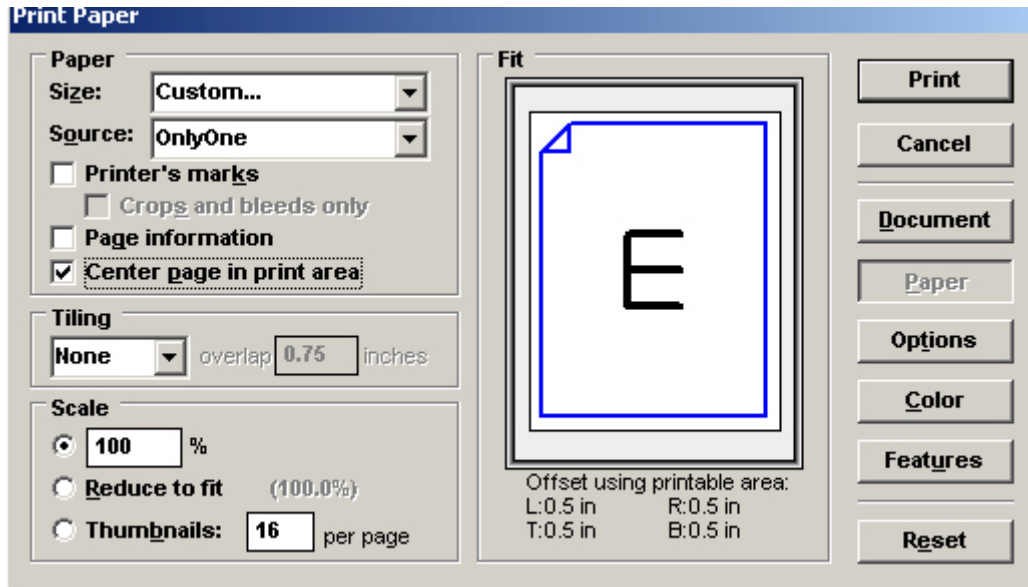

### Step 1

- Open Your Document.
- Select File > Print from the tool bar
- The Document button will be displayed
- Prepare your settings to match the following illustration

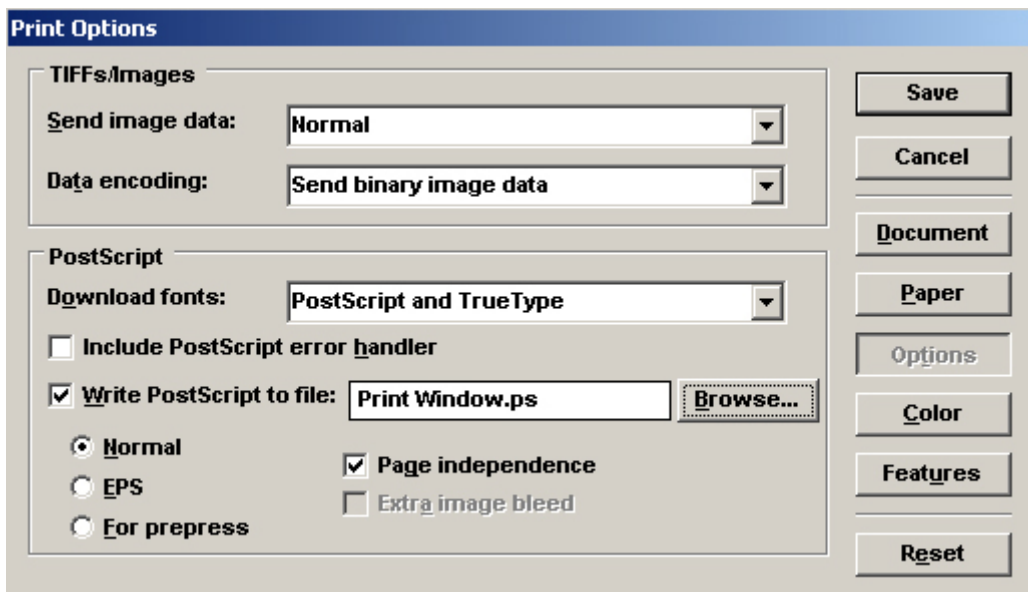

Step 2

- Click the **Paper** button
- Prepare your settings to match the following illustration
- Click the **Custom** button in the upper left corner

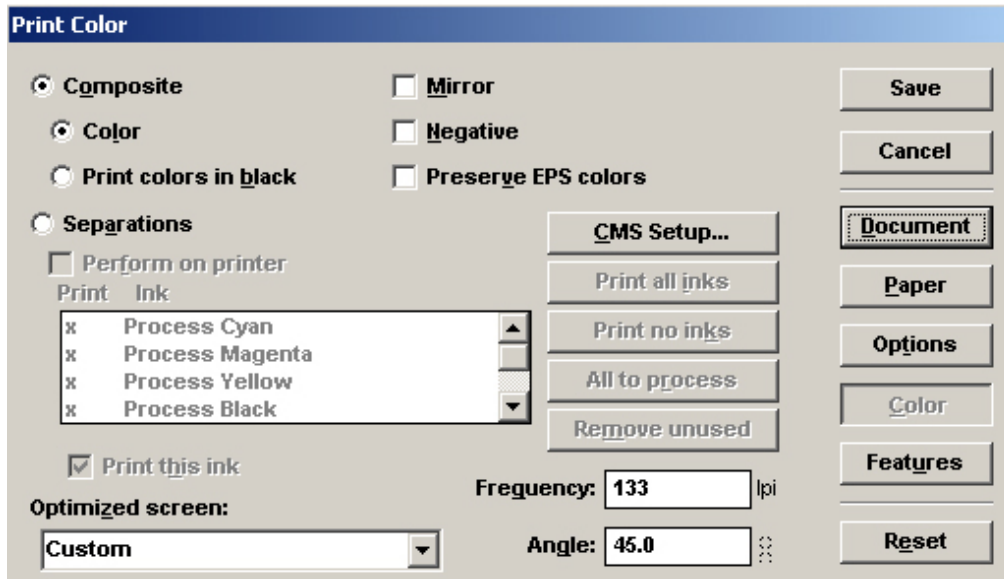

Step 3

- Click the **Options** button.
- Adjust your settings to match the following illustration.
- Click the 'Save As...' button (left of the 'Options' button)

Step 4

- In this step you will be creating a postscript file as output.
- Select the directory location for your postscript file.
- Enter file name for your postscript file
- Click the 'OK' button

Step 5

- Select the directory location for your PDF..
- Enter file name for your PDF
- Click the 'Save' button.
- Congratulations. You have now successfully created a PDF file.
- Please see the FTP file transfer section in order to do the transfer electronically.
